

# this is the format we need to use

Absolutely! Here's your Project Raseed idea, formatted exactly as per the provided submission template for the Hack2Skill Agentic AI Program 2025.

## Team Details

- **Team name:** [Your Team Name]
- **Team leader name:** [Your Team Leader Name]
- **Problem statement:**  
Managing physical receipts is cumbersome, leading to lost records, manual expense tracking, and underutilized purchase data. Users lack a seamless, intelligent way to digitize, organize, and leverage receipt information for personal finance management within Google Wallet.

## Brief about the idea

**Project Raseed** is an AI-powered personal assistant that digitizes receipts, analyzes spending, and delivers actionable financial insights—all within Google Wallet. By leveraging Google's Gemini multimodal AI, Vertex AI Agent Builder, and Google Wallet APIs, Raseed enables users to scan receipts, query their spending in any language, and receive personalized savings suggestions as Wallet passes, making financial management effortless and insightful.

## Opportunities

- **How different is it from any of the other existing ideas?**  
Unlike generic expense trackers or manual receipt scanning apps, Raseed offers real-time, multimodal receipt ingestion (photo, video, live stream) in any language, deep spending analysis, and direct integration with Google Wallet for actionable passes and notifications.
- **How will it be able to solve the problem?**  
Raseed automates receipt digitization and categorization, provides instant insights, and allows users to interact in their local language. All insights and actions are delivered as Wallet passes, reducing manual effort and maximizing the value of purchase data.
- **USP of the proposed solution:**
  - Multimodal, multilingual AI for universal receipt capture
  - Actionable outputs (shopping lists, insights, reminders) as Google Wallet passes
  - Personalized, proactive financial advice and savings suggestions
  - Seamless, secure integration with Google's ecosystem

## List of features offered by the solution

- Multimodal receipt ingestion (photo, video, live stream) in any language
- AI-powered extraction of itemized purchase data, taxes, and fees
- Automated creation of digital receipt passes in Google Wallet
- Local language query support for spending analysis, shopping lists, and more
- Personalized spending insights and savings suggestions
- Dynamic, actionable passes and push notifications via Google Wallet API
- Secure storage and easy retrieval of all receipts and insights

## Process flow diagram or use-case diagram

```
[User captures receipt (photo/video/stream)]
    |
    v
[Gemini AI extracts data]
    |
    v
[Data structured & stored]
    |
    v
[Pass generated & added to Google Wallet]
    |
    v
[User queries in local language]
    |
    v
[Agent analyzes, responds, and updates passes/notifications]
```

*(You can convert this to a visual diagram for your deck.)*

## Technologies to be used in the solution

- **Gemini Multimodal AI** – For image/video/text analysis and multilingual support
- **Vertex AI Agent Builder** – For conversational agent and query handling
- **Google Wallet API** – For pass creation, updates, and notifications
- **Google Cloud Storage** – For secure data storage
- **Google Cloud Functions** – For backend logic and workflow automation

## Architecture diagram of the proposed solution

```
[User Device]

[User's Google Wallet App]
```

*(You can create a block diagram based on the above flow for your submission deck.)*

### **Wireframes/Mock diagrams of the proposed solution (optional)**

- **Receipt capture screen:** Simple camera interface with upload option
- **Digital receipt pass:** Itemized list, total, date, and link to insights
- **Insights pass:** Spending trends, savings tips, and actionable buttons (e.g., create shopping list)

*(You may include sketches or digital mockups as per your team's preference.)*

Let me know if you need editable diagrams, mockups, or want to customize any section further!
