

DEPARTMENT OF CSE(AI&ML)|MRCET

III Year B.Tech-I Semester Application Development-I Summary Sheet

ProjectTitle:		Fund4life:A Community-Driven Emergency Medical Support System					
ProjectCode:		23CSMAD1E19		BatchSize:	03	Batch:	2025-26
Domain/Area:		Web Application, Social Welfare			SDGMapping (01)No-Poverty		
Abstract:		Fund4Life is a Flask-based web platform that empowers donors to contribute funds to verified NGOs through a secure and transparent process. It features donor registration with OTP verification, admin-managed NGO approvals, and smart distribution of collected funds based on medical emergency needs. The platform enables two-way support where donors can also request emergency medical assistance. This system improves transparency, prevents fraud, and strengthens community engagement with healthcare causes aligned with SDG 3 (Good Health and Well-being).					
Technical(S/w&H/w)Specifications				Module(s)Specifications			
Software Requirements: Backend: Python 3.11, Flask (Microframework) Frontend: HTML5, CSS3, Bootstrap 5, JavaScript Database: JSON (Phase I - Local), MySQL Authentication Email Service		Hardware Requirements: System with 4GB+ RAM (8GB recommended) , Local development server , Web browser (Chrome), Cloud hosting (AWS for deployment) , Mobile responsive design support		1. Donor Registration & OTP Verification 2. Donor Login & Dashboard 3. Admin Dashboard & NGO Management 4. NGO Registration & Approval System 5. Donation Distribution System 6. Analytics and Logs (optional add-on)			
ArchitectureDiagram				Methodology			
				Development Approach - Agile with short, iterative development cycles - Working in phases (currently in Phase I) Technical Implementation - Local JSON storage used in Phase I - OTP-based multi-layer security Quality Assurance - Testing at all levels: unit, integration, system, and user testing Project Management - Scrum methodology with daily team check-ins Academic Alignment - Conducted literature review for research validation			
ExistingSystem				ProposedSystem			
1. One-time / occasional donations 2. Mostly one-way: donor → recipient 3. Limited to manual checks by platform teams 4. Forms and campaign creation mostly manual 5. Marketplace-style fundraising				1. Monthly micro-donations (from ₹100) 2. Two-way: Donors can also request help during emergencies 3. Ongoing, trust-based emergency aid system 4. Simple registration + medical doc upload + quick approval process 5. Multi-layer security: OTP login, document-based verification
